

APP GUIDE

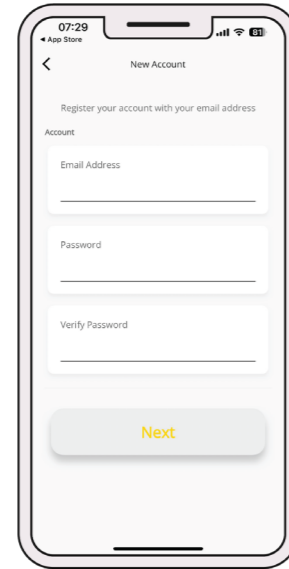

Getting Started

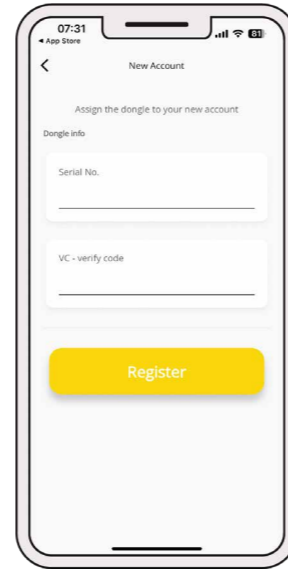

1. Download your app

First, download the Polar ESS smartphone app. You'll need this to manage and monitor your system remotely.

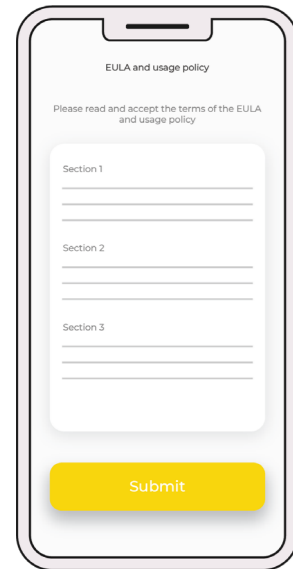

2. Create your account

Second, register an account on the app. Here, you'll provide us with your details and set up a username (your email) and password.

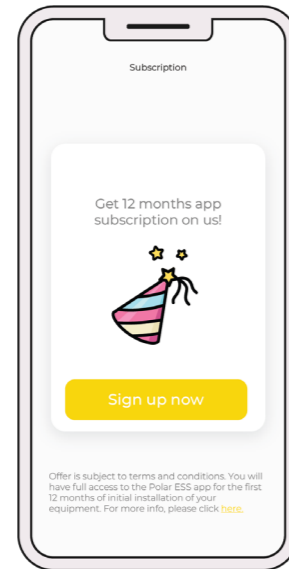

3. Connect your Wi-Fi dongle

Third, the app will ask you to assign the dongle to your new account. This will ensure your system data is being smoothly communicated between hardware and software.

4. EULA and usage policy

Next, there's the legal bit of going through the Polar ESS EULA (end user licence agreement) and usage policy.

5. Start your free, 12-month app trial

Once the app/dongle are set up and the system has ran its firmware checks, you'll be presented with a subscription screen to pop in your payment details. (No charge for 12 months – it's free on us!) Note that the app is only available once this trial subscription screen has been completed.

Managing your app subscription

The first 12 months of your Polar ESS app access are free.

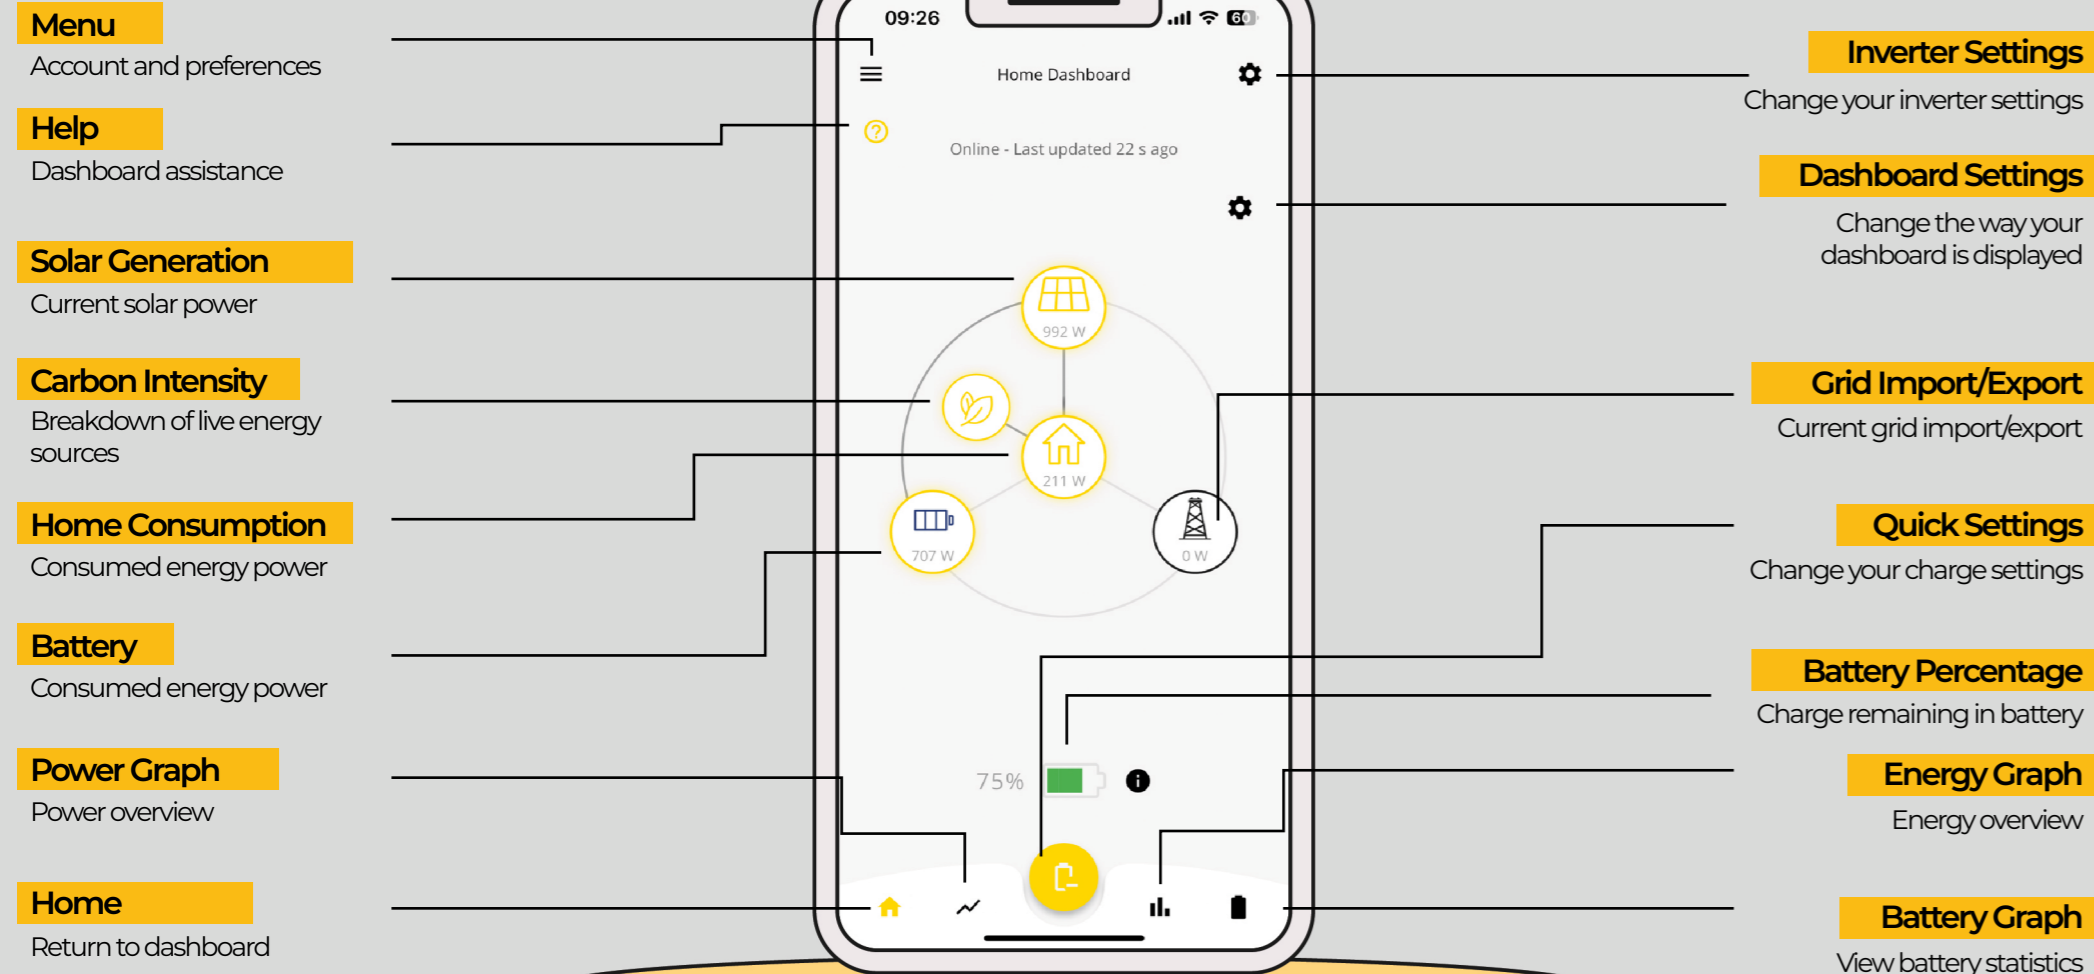

After this introductory period, app access is billed from just £1.99*/month.

This is both optional and cancellable at any time. If you want to manage your system without subscribing to the app, you'll still be able to do so via the control panel on your inverter.

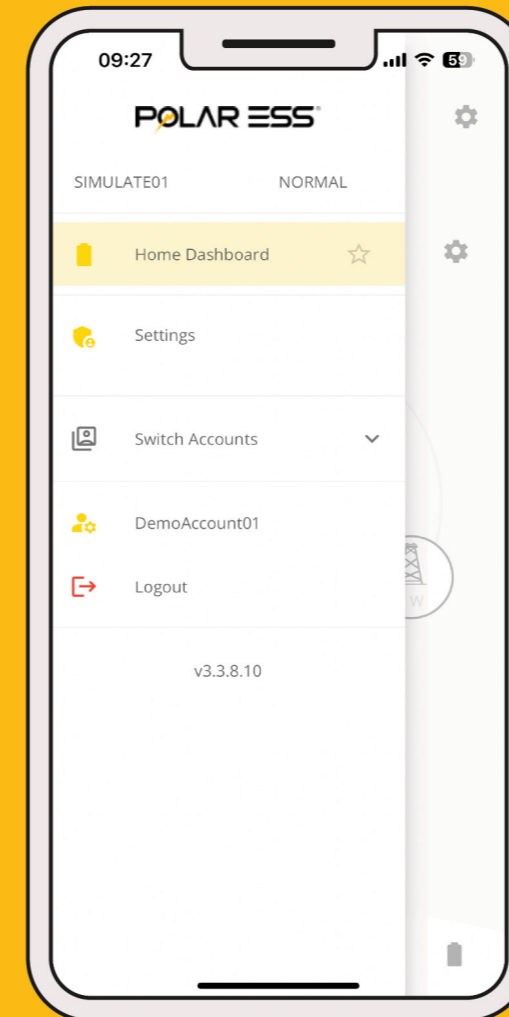

(*Subject to inflation.)

Your Dashboard

The Menu

Home Dashboard

Access your home dashboard and gain insightful information into your consumption and savings

Settings

Manage your account, change preferences, setup a WiFi dongle and change your monitoring settings

Switch Accounts

Switch between your registered accounts that are linked to your device

Logout

Log out of your account. You will be taken back to the login screen

Power Graph

Date Selection

View historical data by date

Power Wattage

Breakdown of power consisting of solar, battery, grid, and home

Import Source

Toggle the graph view between solar, home, battery, and grid

Time Selection

Data can be viewed over 1, 3, 6, 12, or 24 hour time periods

Graph Data

A visualisation of your selected power source(s)

Power Values

Peak power values for daily, weekly, monthly, and yearly

Energy Graph

Home Consumption

Energy consumed from solar, battery, and grid

Battery Discharge

Battery discharge energy to the home and grid

Grid Export

Export energy from solar or battery

Consumption Overview

Energy breakdown and total values for daily, weekly, monthly, and yearly

Graph Data

Energy data can be displayed half hourly, daily, weekly, monthly, or yearly

Solar Energy

Shows how much solar energy has gone to the house, battery, or grid

Battery Charge

Battery charge energy from solar or grid

Grid Import

Imported energy from the home and battery

Battery Settings

Enabling System Modes

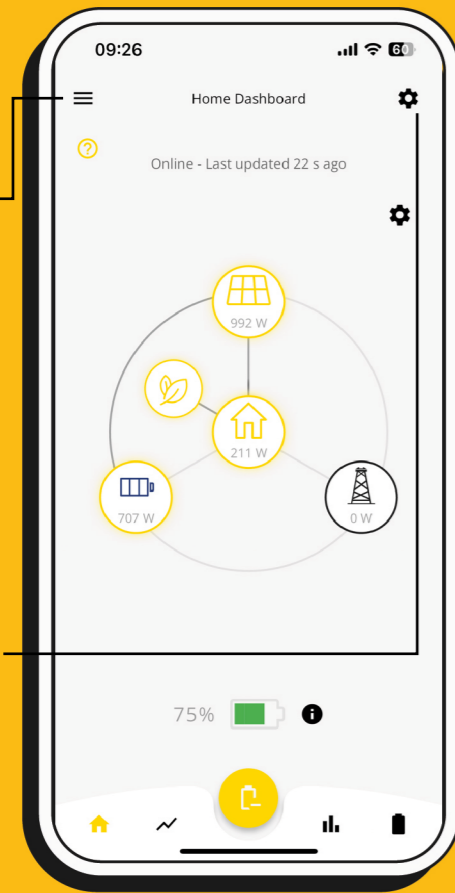

From the dashboard, select the  icon

Select 'Settings' from the list

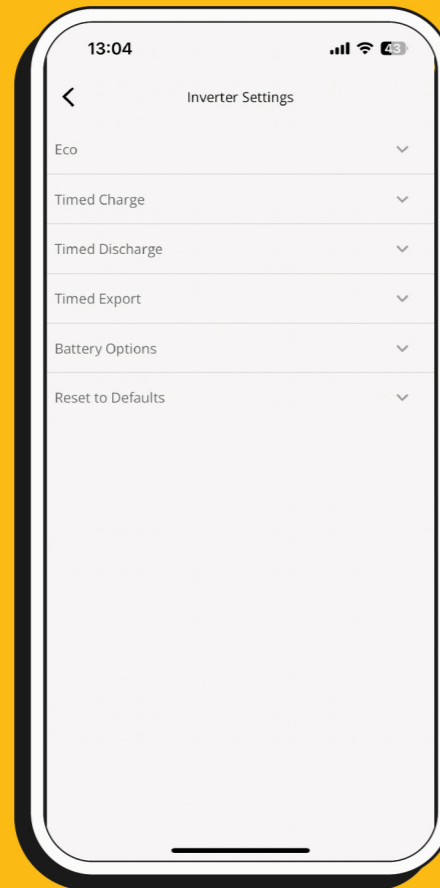

Select 'Preferences'

Under 'System Modes' section, toggle 'Show System Modes Button' to ON

The System Modes icon  will now be displayed in the top right corner of the dashboard

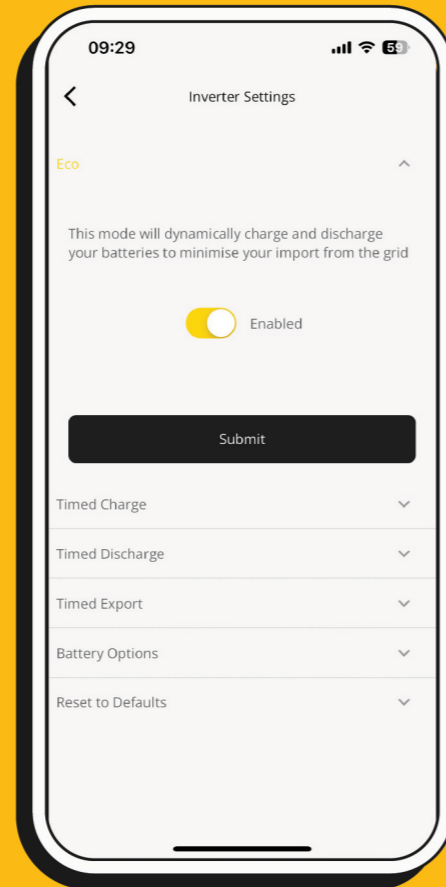

Inverter Settings menu

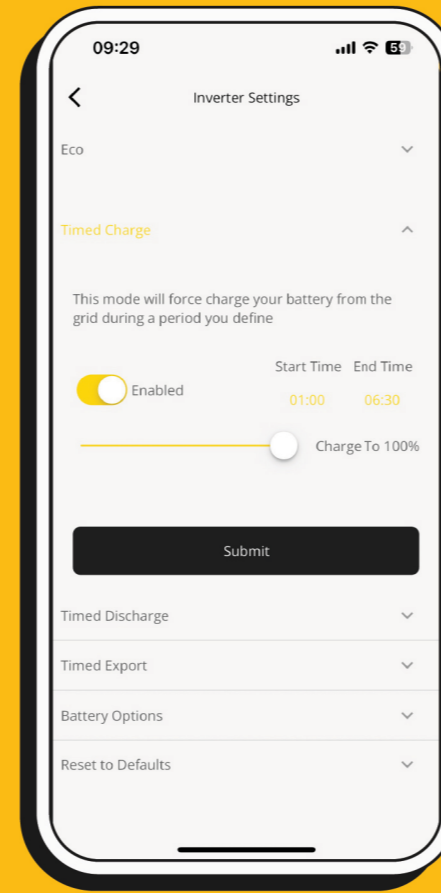

Eco Mode

Dynamically charges and discharges your batteries minimising import from the grid

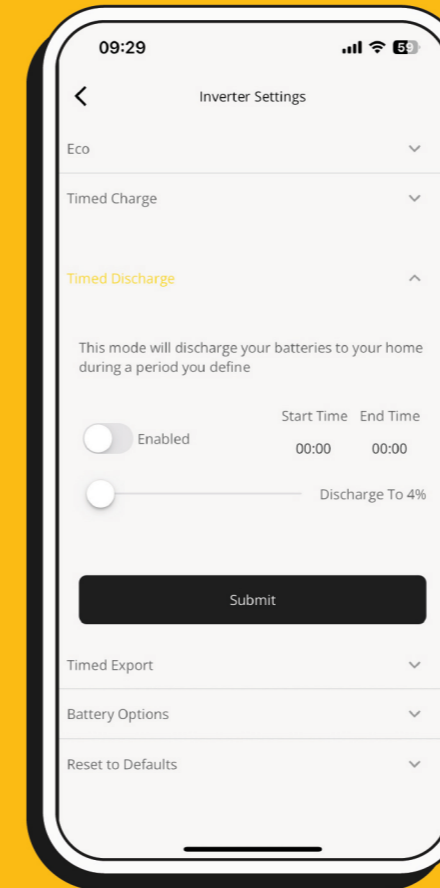

Timed Charge

Manually force charge y battery from the grid at a t your choosing

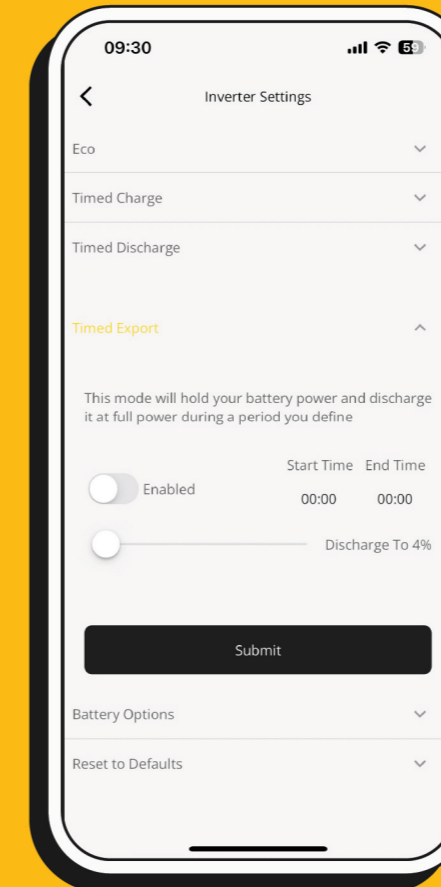

Timed Discharge

Manually discharge your battery to your home at a time of your choosing

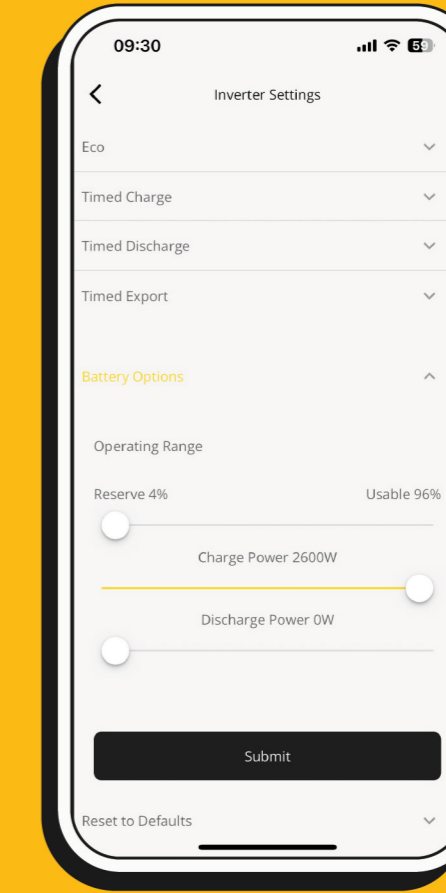

Timed Export

Stores battery power and discharges at full power at a time of your choosing

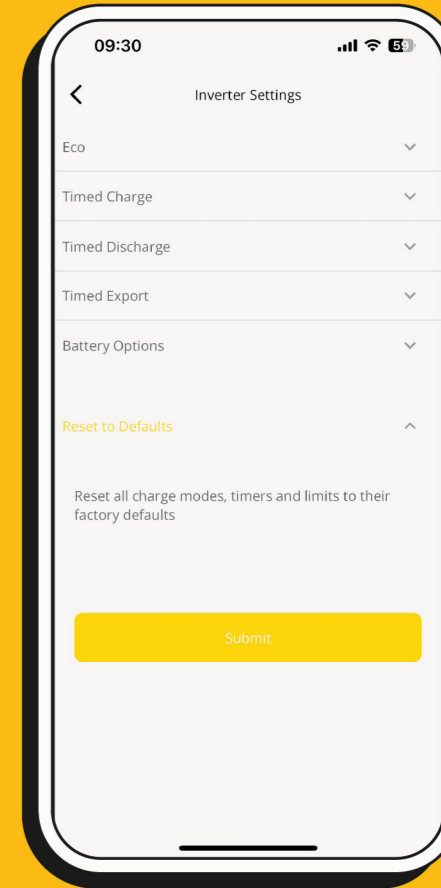

Operating Range

Set operating range, such as reserve percentage, charge and discharge power

Reset to Default

Resets all battery settings back to their factory default settings

Consumption

Solar Generation

Provides a real-time breakdown of your generation, offering insights into how much energy you are producing at any given moment.

Grid Import & Export

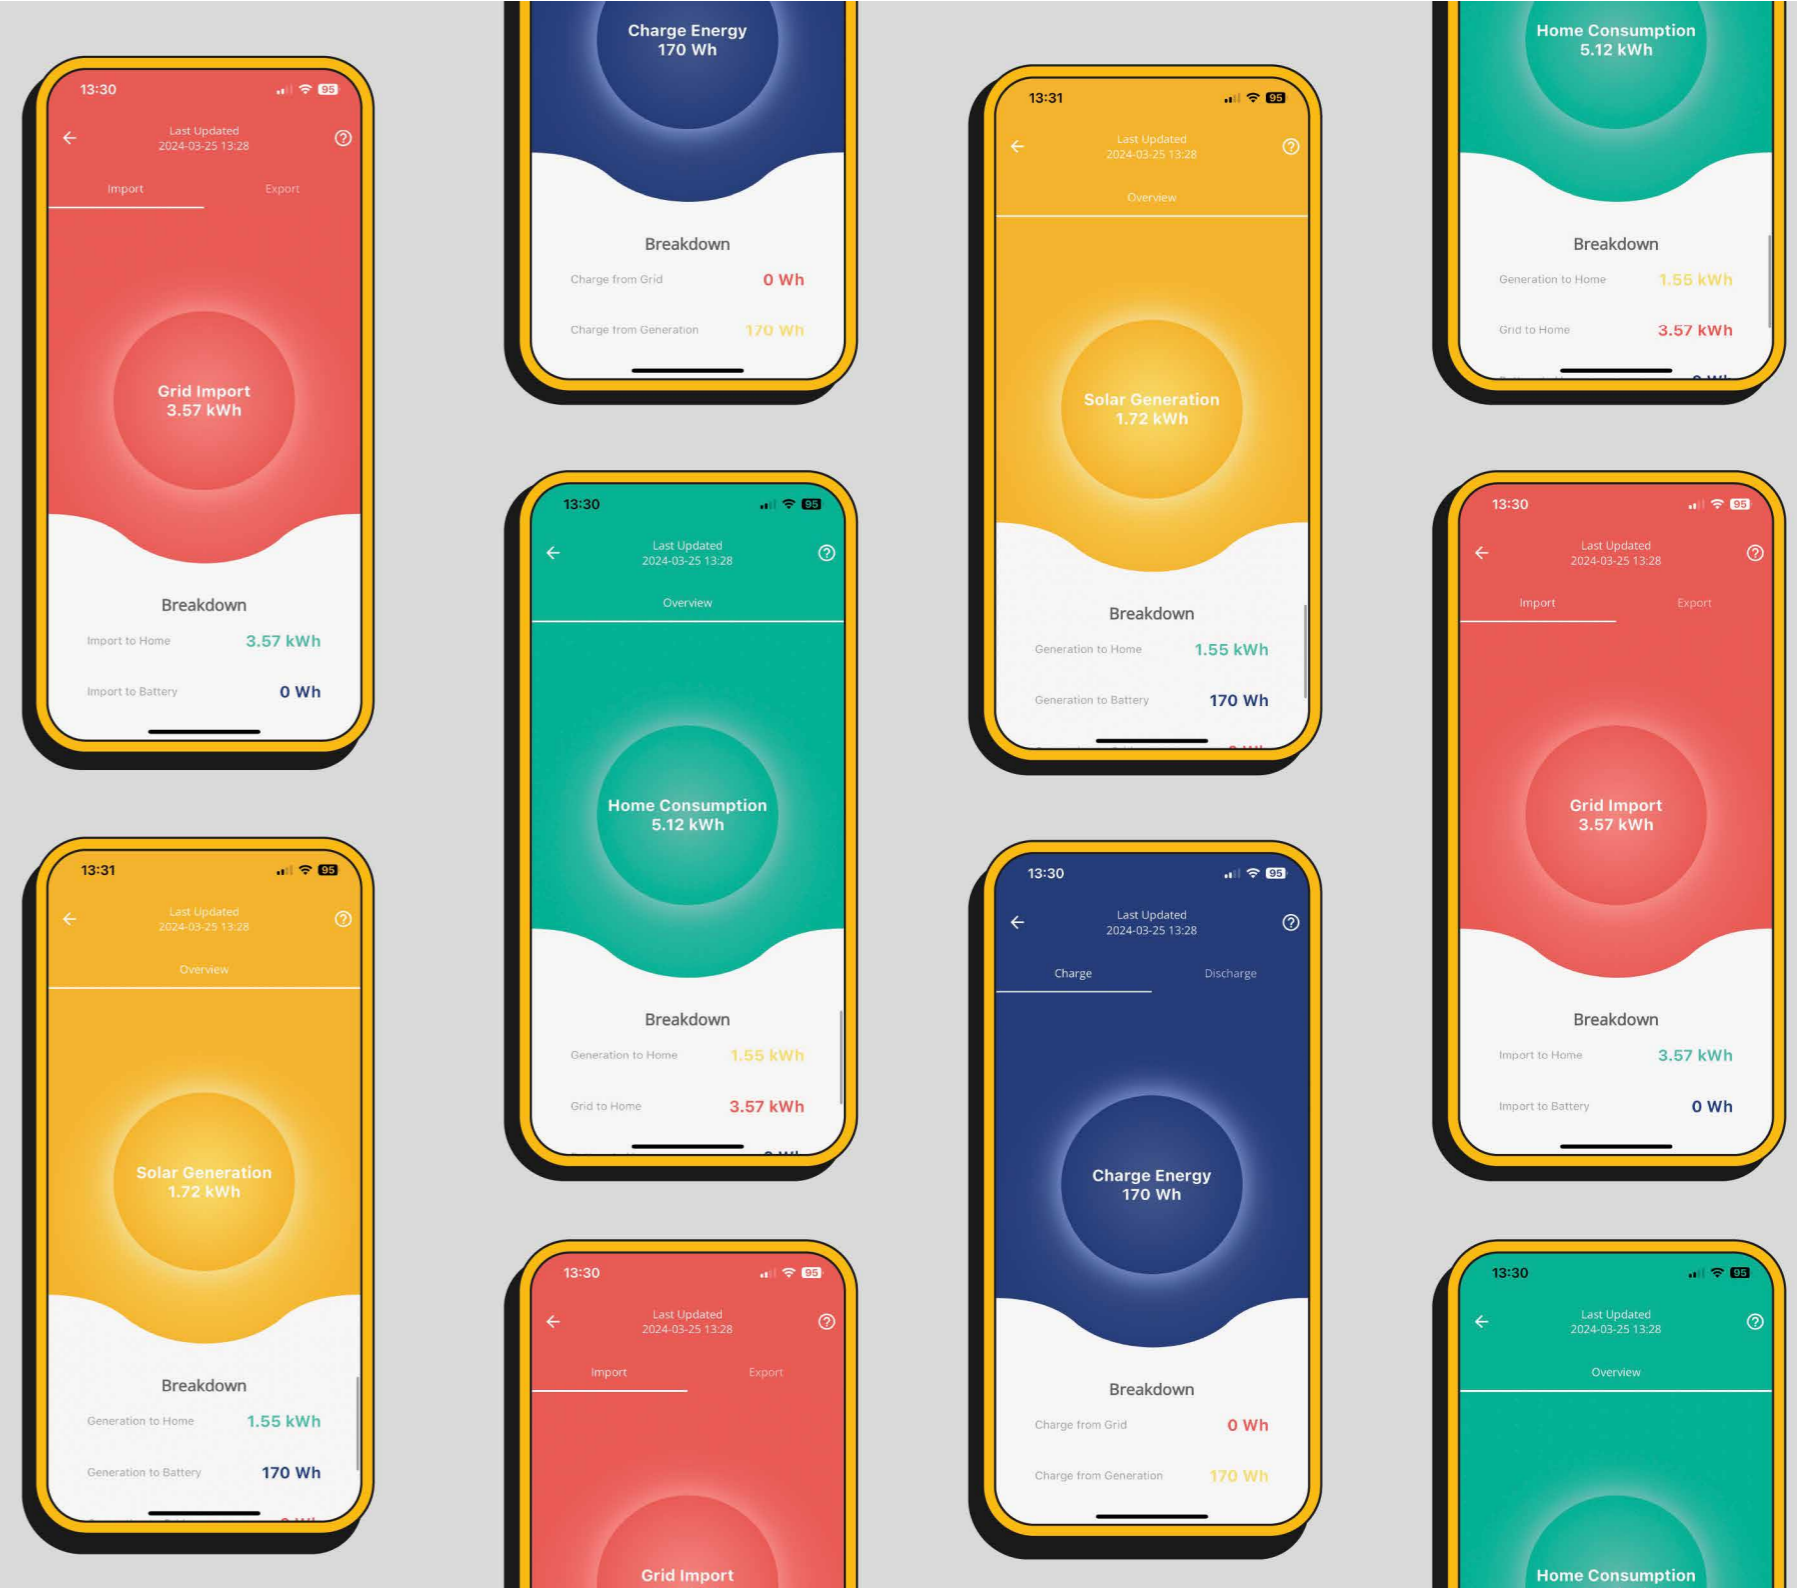

Track your grid import and export status in real-time, monitoring the flow of electricity to and from the grid as it fluctuates throughout the day.

Battery Charge & Discharge

Stay informed about your battery's charge and discharge activities as they occur, allowing you to optimise energy usage and storage based on current demands.

Home Consumption

Monitor your homes energy consumption in real-time, gaining valuable insights into how much electricity your household is using at any given time.
